**About this role**

Test Automation Engineer

Job Overview and Purpose

We believe that every customer deserves a chance to see their ambitions come to life and those aspirations should be delivered expediently and innovatively – with our name proudly associated with that. You will help shape the story and build something that leaves a 'Marc'!

As a Test Automation Engineer, you'll work with talented teams across the business, including development and product teams, so strong stakeholder management skills are imperative.

You'll take ownership of the design and implementation of the automation across product development projects, with the opportunity to shape the wider testing operation, from influencing key technology choices to cultivating a team around you. You'll also act as a critical point of contact, championing quality and driving best practices wherever possible.

#### Key Responsibilities

- \*You have strong test automation experience having used tools such as Selenium, Cucumber, Java, Appium, C#, Python

- \*You're able to design and implement testing best practice strategy and frameworks

- \*You've worked in Agile teams and have a good understanding of TDD, BDD and CI/CD

- \*You have API testing experience

- \*You're familiar with DevOps environment and associated tooling
- \*You have advanced organisation skills and meticulous attention to detail

- \*You're a proactive and collaborative with excellent communication/ stakeholder management skills
